

Assignment 6 (Group project)

Deadline: **19.01.26**

- All completed task files must be pushed to the designated GitHub repository.
- **Assessment:** Successful submission requires **GitHub push and defense**

Read and use: https://tutorial.djangogirls.org/en/django_models/

Tasks

- 1. Create Django Models**
 - Design at least **2–3 models** relevant to your project idea
 - Use appropriate field types (CharField, ForeignKey, DateTimeField, etc.)
 - Define relationships between models where applicable
- 2. Create Database Tables**
 - Generate and apply migrations using Django ORM
 - Verify that all tables are correctly created in the database
 - Populate tables with sample data
- 3. Configure Django Admin Panel**
 - Register all models in Django Admin
 - Customize admin views:
 - list display
 - search fields
 - filters
 - Ensure data can be created, edited, and deleted via admin
- 4. Create Django Templates**
 - Implement at least **2 HTML templates**
 - Use Django Template Language (DTL):
 - template inheritance
 - loops and conditionals
 - Display dynamic data from the database
- 5. Add Styling with CSS**
 - Create a separate CSS file
 - Style templates for readability and layout
 - Ensure static files are correctly configured and loaded
- 6. Implement API Endpoints**
 - Create at least **1–2 API endpoints** (using Django REST Framework or Django views)

- Support basic operations:
 - GET (retrieve data)
 - POST (create data)
- Test endpoints using Postman or similar tools
